Project: Antonyms

Read and understand **26B_Hw_0.c,** a C program that provides antonyms to common words. An antonym is a word with the opposite meaning. For example, the antonym of ***happy*** is ***sad***. The program is to look for a word and if found, report its antonym. If the word is not found, the program is to display an appropriate message. More instructions are given in **26B_Hw_0.c**

Run the program as required and save the output at the end of the source file as a comment. Compress the source file, input, and output files (if any) and upload the compressed file: 26B_LastName_FirstName_H0.zip

Extra Credit 1: This assignment does not have to be submitted. However, if you do submit it on time and if it is perfect, you may earn your first Extra Credit Point!
